Location: UAE, Dubai

SUMMARY

Senior Blockchain Engineer with 4 years of experience designing and scaling production grade Web3 systems across EVM and non-EVM ecosystems. Specialized in smart contracts, multi-chain architecture, DeFi protocols, and account abstraction. Strong backend expertise in Node.js microservices and distributed systems powering on-chain applications.

Proven experience leading engineering teams, architecting cross-chain infrastructure, and delivering high throughput blockchain applications across L2/L1 networks.

SKILLS

Languages: Solidity, TypeScript, JavaScript, Rust, Python

Blockchain: EVM, Non-EVM, Smart Contracts, ERC-20/721/1155, ERC-4337, Foundry, Hardhat

Backend: Node.js, REST APIs, Event-driven Systems, Microservices, Websocket

Database: PostgreSQL, MySQL, MongoDB (NoSQL), Redis

Frontend: React, Next.js, Tailwind

DevOps: AWS (EC2, S3, Lambda), Docker, CI/CD, Kubernetes

Security: RBAC, MFA, Wallet Authentication

EXPERIENCE

Senior Blockchain Engineer

Nov 2024 – Present

Pixpel.io, Dubai

- Architected and led development of a multi-chain DeFi ecosystem across Polygon, Skale, Solana, and Concordium, integrating smart contracts, off-chain services, and frontend applications.
- Led end-to-end development of an ATM POS terminal implementing account abstraction smart contracts (Solidity on Polygon and Skale) with fiat payment infrastructure, delivering a full-stack system using Next.js, Tailwind, and Node.js APIs.
- Built cross-chain bridge infrastructure aligned with L2 rollup architectures, enabling secure asset transfers across networks.
- Engineered Pixpel Launchpad smart contracts using Solidity and Rust (Concordium, Solana), alongside a Next.js frontend, enabling secure and scalable token launch workflows.
- Led the design and implementation of tokenomics smart contracts (vesting, allocations, token sales), establishing the core infrastructure of the protocol.
- Designed and implemented NFT marketplace (ERC721, ERC1155) supporting insurance, batch operations, delegation, and advanced asset logic.
- Integrated backend APIs and off-chain services with smart contracts to support high-throughput, production-grade systems.
- Developed market maker console with RBAC, MFA, audit logs, and AMM dashboards for monitoring and risk control.

Fullstack Blockchain Engineer

Mar 2023 – Nov 2024

Analog Mutations, Karachi

- Architected and developed smart contracts for the Ponder multi-chain aggregation platform using Solidity and Rust, integrating full-stack systems across React and Node.js.
- Led smart contract engineering for the Emplifai multi-DEX platform using Solidity, Rust, Foundry, enabling scalable cross protocol trading infrastructure.
- Designed and built Haiku, an AI-driven model training ecosystem leveraging ERC-4337 account abstraction, with supporting smart contracts and backend services.
- Engineered a high-performance Solana sniper bot using Rust and Anchor for automated on-chain trading and low-latency execution.
- Built off-chain data pipelines and batching systems to reduce on-chain congestion, improving throughput and overall system efficiency.

Fullstack Developer

Oct 2022 – Mar 2023

BrandH2O, Karachi

- Built a full-stack NFT platform supporting minting, listing, and trading of digital assets with wallet based authentication and smart contract integration.

Blockchain Engineer

Aug 2022 – Oct 2022

Visech Technologies, Karachi

- Designed and developed an NFT marketplace supporting minting, listing, reselling, and on-chain ownership verification.
- Engineered backend systems to manage transactional data flows and application state across blockchain and off-chain services.
- Built backend infrastructure for an NFT launchpad platform enabling project onboarding and token launches.

PROJECTS

DeFi Yield Optimization Platform

- Built a multi-protocol yield aggregator optimizing capital allocation using automated strategies and real-time analytics.
- **Tech:** Solidity, Node.js, React, Web3.js, The Graph, AWS, Docker

AI Smart Contract Auditor

- Developed an AI-powered auditing system for detecting vulnerabilities in smart contracts using static analysis and pattern recognition.
- **Tech:** Node.js, OpenAI APIs, Slither, Solidity, FastAPI

NFT Real Estate Marketplace

- Engineered a blockchain marketplace enabling fractional ownership and trading of tokenized real estate assets.
- **Tech:** Solidity, Next.js, Node.js, IPFS, MongoDB

Play-to-Earn Game Engine

- Designed a blockchain-integrated game engine supporting NFT assets and tokenized reward systems.
- **Tech:** Unity/Unreal, Solidity, Node.js, WebSockets

Blockchain Lottery System

- Implemented a provably fair lottery system using smart contracts and verifiable randomness.
- **Tech:** Solidity, Chainlink VRF, React, Node.js

EDUCATION

Bachelor of Computer Science
University of Karachi

2019 – 2023

Relevant Coursework: Data Structures, Object-Oriented Programming, Database Systems
